**DIE WISSENSCHAFT DER PYRAMIDEN -- DIE SUEATLANTISCHE
ANOMALIE UND KLIMAWANDEL**

Dear Madam Chancellor Angela Merkel,

In reference to my letter dated March 03, 2016, addressed to you in regard to the following subject: "Die Wissenschaft Der Pyramiden -- Die Suedtlantische Anomalie und Klimawandel", here attached, I am writing to inform you of my presence in Germany since 3 months. So, while I am here, my wish is to fulfill the mission that brought here in Europe in 2013: to introduce the basics of my investigations regarding "The Science of the Pyramids and their link to Climate Change" to some key researchers in Germany and Europe (England); to do so, dear Madam, I need the assistance and support of the free people of Germany (their government).

I already spent 3 years in Europe with the hope of discussing this and receiving the support of good governments but in vain. I am confident that Germany will be the wise nation to make the difference.

Although many independent researchers in Germany and around the world have brought some contributions by trying to explain the scientific purposes of the construction of the pyramids, however, based on my researches, I learnt that the international scientific community has overlooked at some scientific aspects of the construction of those stone structures that need further and serious scientific investigations.

In regard to the political obstacles I have been victim from the United States to France and Switzerland, trying to stop me from starting this project, my question is to know if the free people of Germany will have the courtesy and the humility to answer this call.

2/2

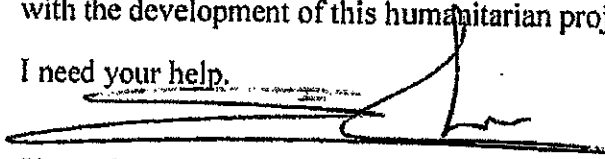

Madam, we have much to learn and discover about the science within the pyramids, and Germany along with Great Britain are welcomed to carry the leadership of this project in Europe. As did Martin Luther with the revolution of the church, so I hope that the Chancellor will see the opportunity behind this project...

My preliminary investigations since 2011 in Seattle Washington to present in Europe, reveals a higher ecological science beyond the stone structures; they were purposely planned, made and created by some responsible governments of ancient civilizations, with the main purpose to protect the environment against climate change, thus, assuring our current existence.

Although my stay in Europe has been filled with great challenges of physical survival and deception from President Francois Hollande and the Leaders of Switzerland, however, I appreciate the consideration and the welcome I receive from the government of Germany through the refugee program. And I hope Germany will bring its support by opening the doors that will allow us to continue this research for the benefit of humanity.

It is with great hope, dear Madam Chancellor, I am confident that through your diplomatic leadership and experience in life and struggle, that politic will not interfere with the development of this humanitarian project.

I need your help.

Sincerely,

Christian-Bernard Magnongui
